Rafał Baczyński-Sielaczek

Professional Goals

I'm master of sociology. After many years of working with people and for people I have chosen a new direction of professional development.

This career path has interested me for quite a while. I believe that high quality is the bestselling point of services and products. Thanks to my diversified experience I have highly developed **interpersonal skills and empathy**, which help me see the bigger picture and function well within a team. My experience in Non Government Organisations has also equipped me with valuable tools, such as **open-mindedness and adaptability**.

In **Portfolio on GitHub** I would like to share my testing knowledge and exhibit my technical skills, which I gained during the testing course I have completed and through self-learning.

I write about my work experience and the tools I use in two articles: "**Good practices in website testing**" and "**My testing tools**".

Goals I'm working on:

1. **Development of programming skills**. In the near future I would like to develop as an automation tester. Purely manual testing limits the scope of testing.
The Direction: Java (IntelliJ IDEA Community Edition, Selenium WebDriver)

2. **Developing skills related to Backend Testing** - REST API, Postman. Fronted testing is not enough.
The Direction: REST API (Postman, Swagger)

3. **Testing mobile and web applications**. The internet is no longer stationary. Movement is an integral part of our lives. Applications and websites - must follow us. Current web testing will be very helpful in achieving this goal.
The Direction: I started a course on creating automated tests for mobile applications at the user interface level. Creating tests using the Java programming language.
